

Workshop Overview.

Thinking Outside of the Box. Equipment, Innovation and Choice

Salford Occupational Therapy, Sensory and Equipment Services have been involved in a pilot study since November 2009 to implement the Personalisation Agenda. The pilot includes a workforce of multi professions such as Social Workers, Community Assessment Officers and Occupational Therapists.

The workshop will be very interactive looking to share and swap ideas and experiences with other professionals and groups involved in the delivery of equipment services and the Personalisation Agenda. Its main focus as the title suggests is to recognise why and how equipment service delivery needs to begin thinking outside of the box and be innovative in its delivery of services to ensure clients are given the right to choose.

We will also be sharing our previous worries and misconceptions, and hope to dispel some of the more common myths surrounding this new government initiative.
